

# 30 Days DevOps Roadmap

## DevOps Cheat Sheet

### DEVOPS CHEAT SHEET

#### 1. LINUX BASICS

Navigation: ls, cd, pwd

File Ops: touch, cp, mv, rm, cat, nano, vi

Permissions: chmod, chown, umask

Processes: ps, top, kill, jobs, fg, bg

Networking: ping, curl, wget, netstat, ifconfig, ip a

Disk Usage: df -h, du -sh

#### 2. GIT & VERSION CONTROL

Clone Repo: git clone <url>

Stage & Commit: git add ., git commit -m "msg"

Push: git push origin main

Branch: git branch new-branch, git checkout branch

Merge: git merge branch-name

Undo: git reset --hard, git revert <commit>

Status & Log: git status, git log --oneline

#### 3. CI/CD BASICS

Jenkins: pipeline stages - build, test, deploy

GitHub Actions: workflows, jobs, steps

Triggers: on: push, pull\_request

Artifacts: store build outputs

Environment Variables: set in Jenkins/GitHub Actions

#### 4. DOCKER

# 30 Days DevOps Roadmap

List Images: docker images

Run Container: docker run -d --name cname image

Build Image: docker build -t tag .

Logs: docker logs container-id

Networks: docker network ls

Volumes: docker volume ls

## 5. KUBERNETES

-----

Contexts: kubectl config get-contexts

Pods: kubectl get pods, kubectl describe pod <name>

Deployments: kubectl create deploy name --image=image

Services: kubectl expose deployment name --port=80 --type=NodePort

Scaling: kubectl scale deploy name --replicas=3

## 6. CLOUD (AWS BASICS)

-----

EC2: launch instance, connect via SSH

S3: aws s3 mb s3://bucket-name

IAM: create users, assign roles

Security Groups: open/close ports

## 7. INFRASTRUCTURE AS CODE (TERRAFORM)

-----

Init: terraform init

Plan: terraform plan

Apply: terraform apply

Destroy: terraform destroy

Variables: defined in .tfvars

## 8. CONFIGURATION MANAGEMENT (ANSIBLE)

-----

Run Playbook: ansible-playbook playbook.yml

Inventory: hosts file

Modules: apt, yum, service, copy

Handlers: notify tasks after changes

# 30 Days DevOps Roadmap

## 9. MONITORING TOOLS

-----

Prometheus: metrics collection

Grafana: visualization

Commands:

- systemctl start prometheus
- systemctl start grafana-server

## 10. COMMON DEVOPS COMMANDS

-----

- tail -f /var/log/syslog (Live log monitoring)
- ssh user@ip (Remote access)
- scp file user@ip:/path (Copy files to remote)
- env (List environment variables)
